

CONSTRUCTION PROJECTS

Managing a construction project requires planning, organization and a dedicated team working towards a common goal. Our pledge is to help your new or renovated facility open on-time and be completely functional before the patients arrive. For over four decades, we've been involved with tens of thousands of successful new or renovated construction projects.

We are experts at working with all types of construction team members including in-house staff, construction and design teams, outsourced equipment planners, architects, PMs, GCs, etc. Every project is unique and we're flexible and work with everyone on your team involved in your project within your guidelines.

BUDGETING: CME can provide a considerable amount of the FF&E required for a new healthcare facility. We can construct a comprehensive product and logistics quote.

CHOOSING AND ORDERING THE RIGHT EQUIPMENT: Making an important decision on your new equipment can require more than a quote; we make sure you get everything you need to make that informed choice.

RECEIVING AND WAREHOUSING: We realize that secure storage space and resources are at a premium in any construction project. We have over 30 service centers nationwide to serve you.

PRODUCT TRACKING: A new project can include products from over 200 manufacturers. CME ensures these products arrive at the right time to avoid unnecessary storage charges and make every delivery deadline.

CONTRACTOR-INSTALLED ITEMS: We can provide many of your contractor-installed items, typically called out when needed by the construction team.

ASSEMBLY: CME gets your new equipment assembled correctly in our warehouse prior to delivery.

DIRECT TO SITE (DTS) DELIVERY AND INSTALLATION: When you are ready to take delivery of your items, we will be there. When we leave your facility, you will have all your equipment in the right place, working correctly and ready for patients.

BIOMEDICAL CHECK-IN OF NEW EQUIPMENT: Many biomedical teams are stretched thin especially during new construction. We can amplify your biomed team. We have a crew that can assist with electrical checks, battery checks, asset-tagging and equipment inspections to get you open on time.

Delivering a Better Experience
